ECSS 2017

Multimodal Systems

Part of **NOVA-LINCS** (NOVA Laboratory for Computer Science and Informatics)

Hosted by the Computer Science Department, FCT NOVA

Research in Interactive Multimedia

Research methods and tools to deal with the different aspects of **producing, describing, processing and presenting multimedia information**

Interactive systems, information processing, games, interactive art

Iterative Design

Stories Everywhere

Narratives/Information Access

InStory supports a new form of narratives, that are navigable in space

Mobile storytelling, information access and gaming activities

PDA, mobile phone, and Web interfaces

Interaction in the real world

Cultural heritage as an application area

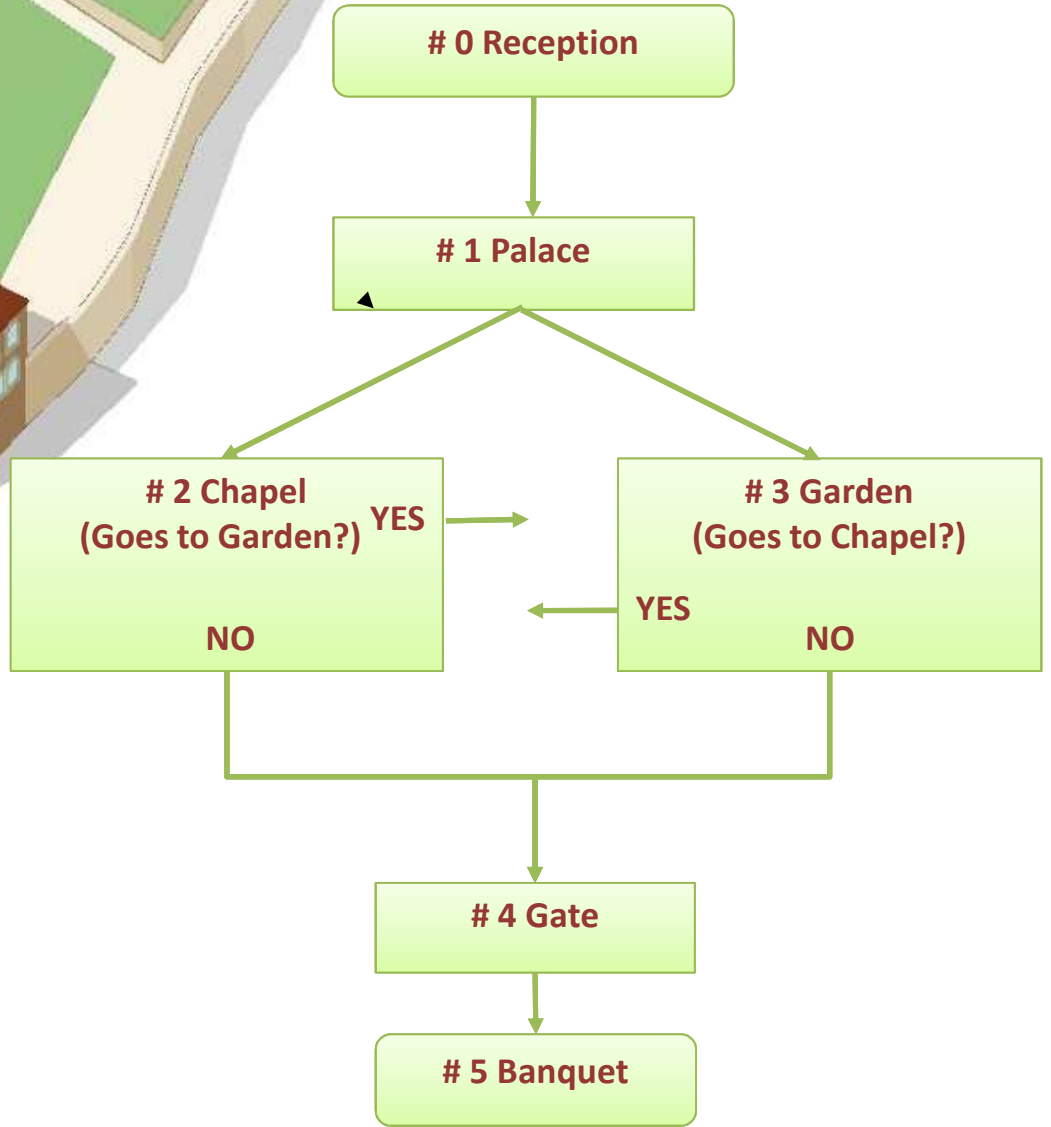

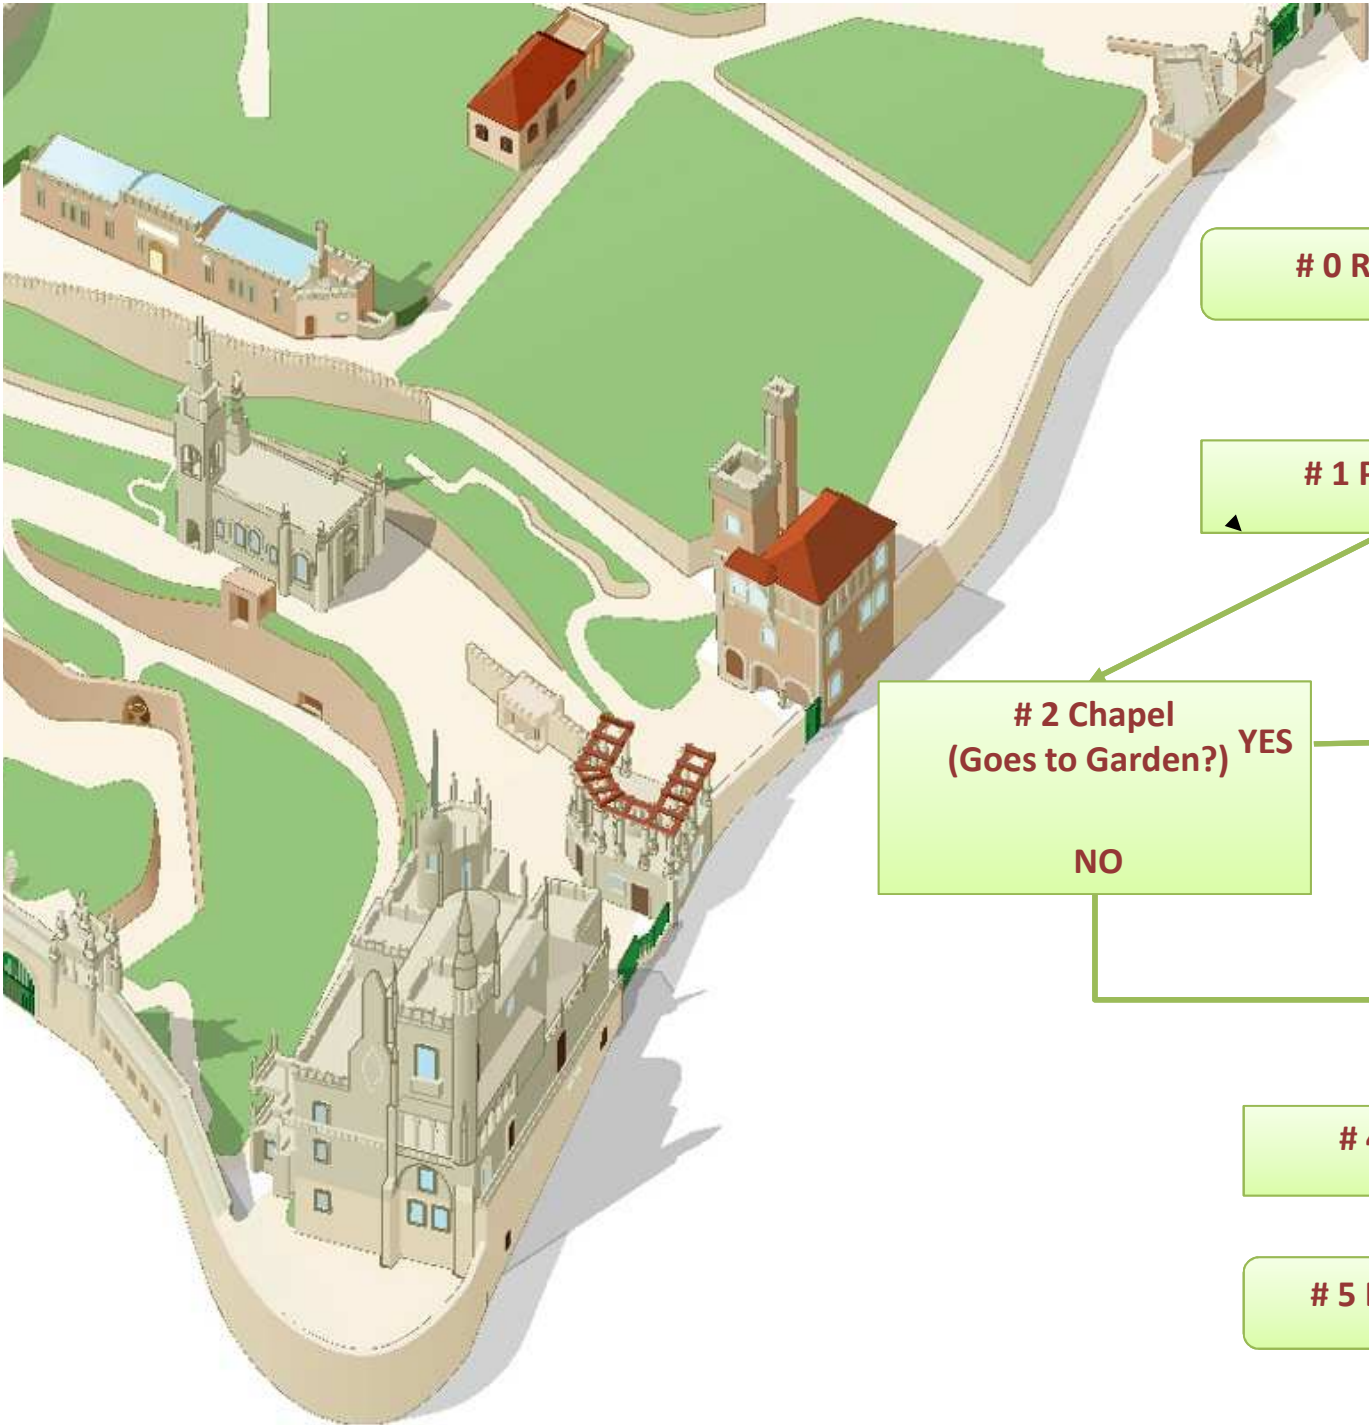

MAPA

VOLTAR

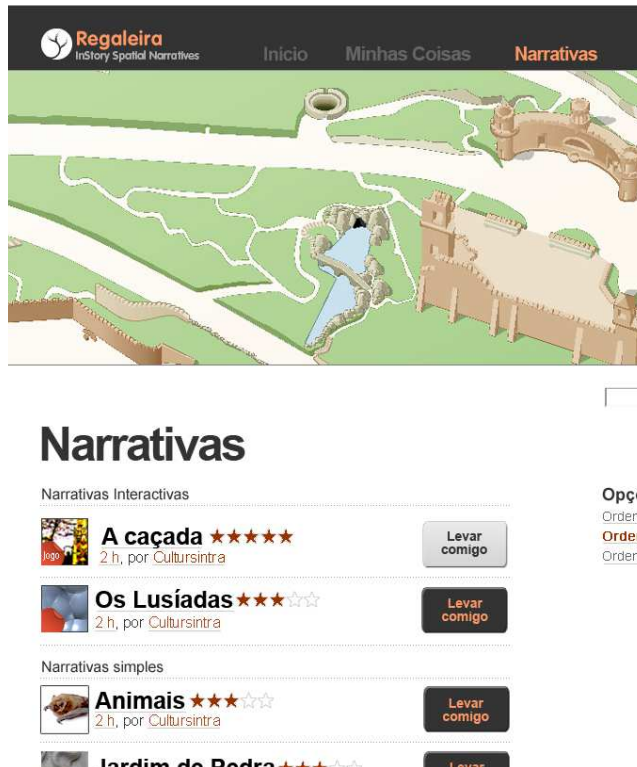

Web

Retrieval, map, authoring, media sharing (community)

PDA

Location based narratives and information, map, media capture, annotation

Mobile Phone

Location based information, map, media capture

Interaction Devices

Gauntlet, a bracer embedded with sensors and actuators

Object identification by RFID

Gesture recognition using accelerometer and compass

I/O device, Bluetooth serial port connection

Used in Noon, an interactive installation to explore object memories

(sponsored by Nokia)

Interaction Devices

Noon

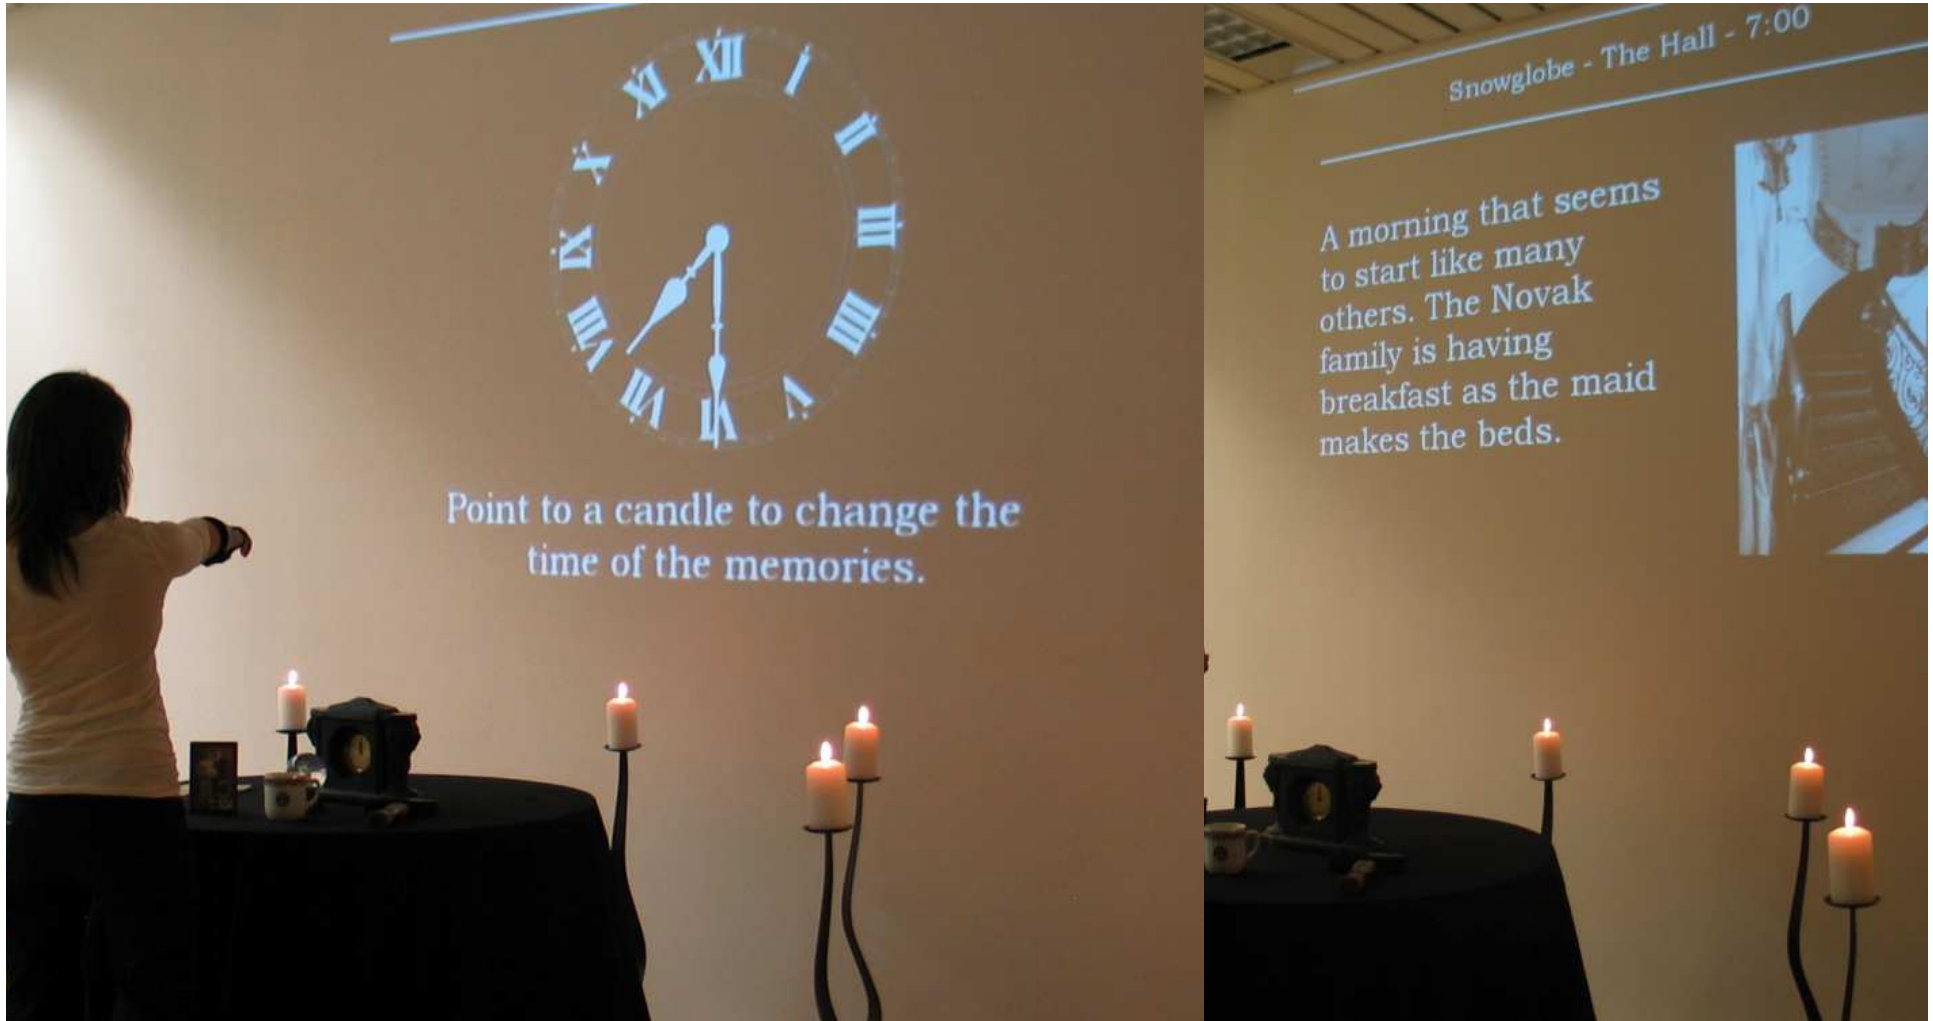

Noon – A Secret Told by Objects (Tiago Martins et al)

An investigation upon memories of old objects to uncover the answer to a mystery

Narrative-driven, exploratory, few gaming aspects

Noon

Memories and Recalling

Personal and Shared Memories

Technological support for individual and collective memories

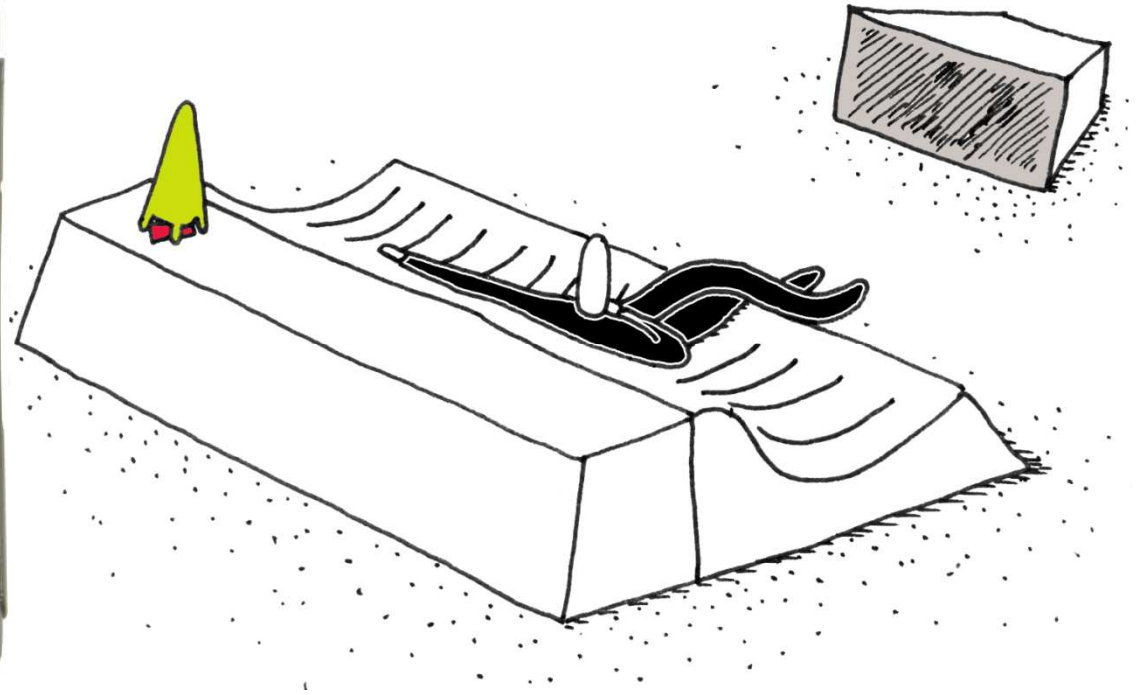

Annotation of multimedia information (authoring)

Storage, indexing, and classification of multimedia information

Multimedia information retrieval system

Multiple contexts of use

Multiple access interfaces

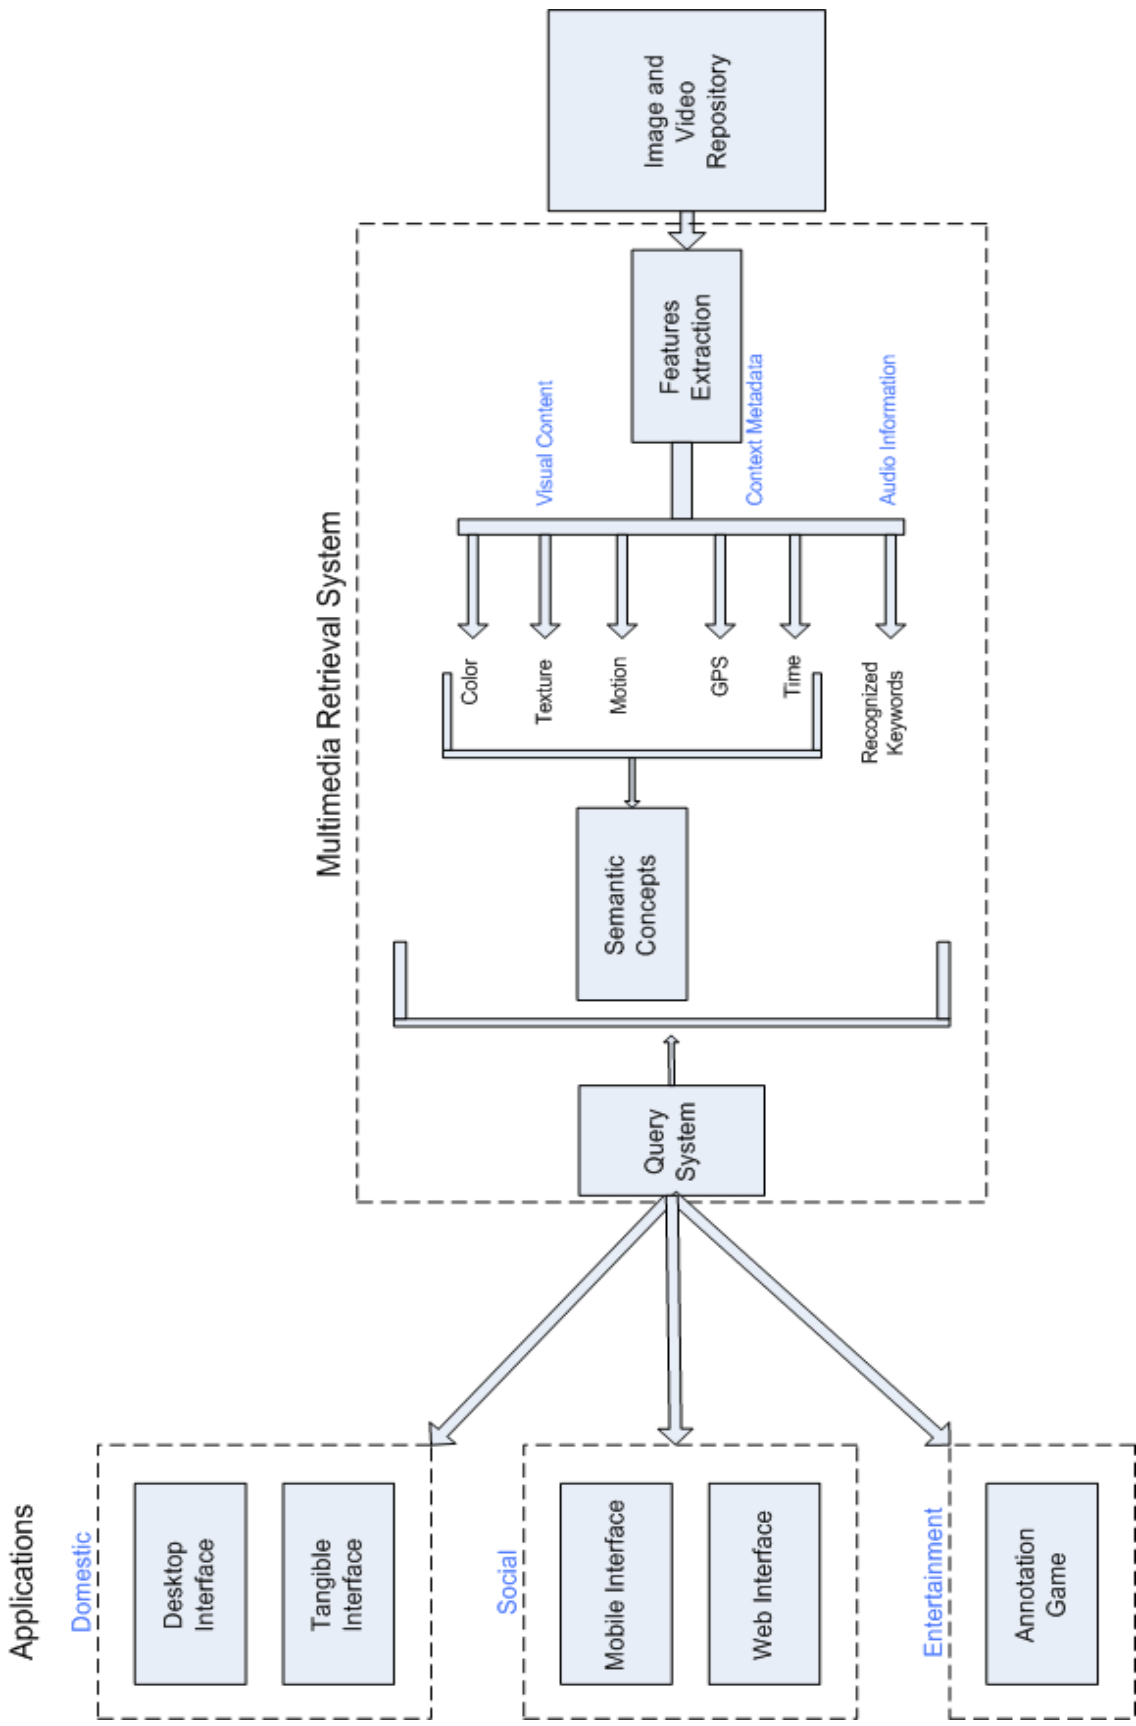

Project Memoria

Content based image and video search

Retrieval system using multimedia content and context features

Interfaces for multiple purposes (leisure, learning) and users

Annotation of the multimedia materials

Interface Design

User centered design

Participation of the potential users

Balance between technology and user expectations

Iterative process with multiple refinements

User evaluation

Interfaces

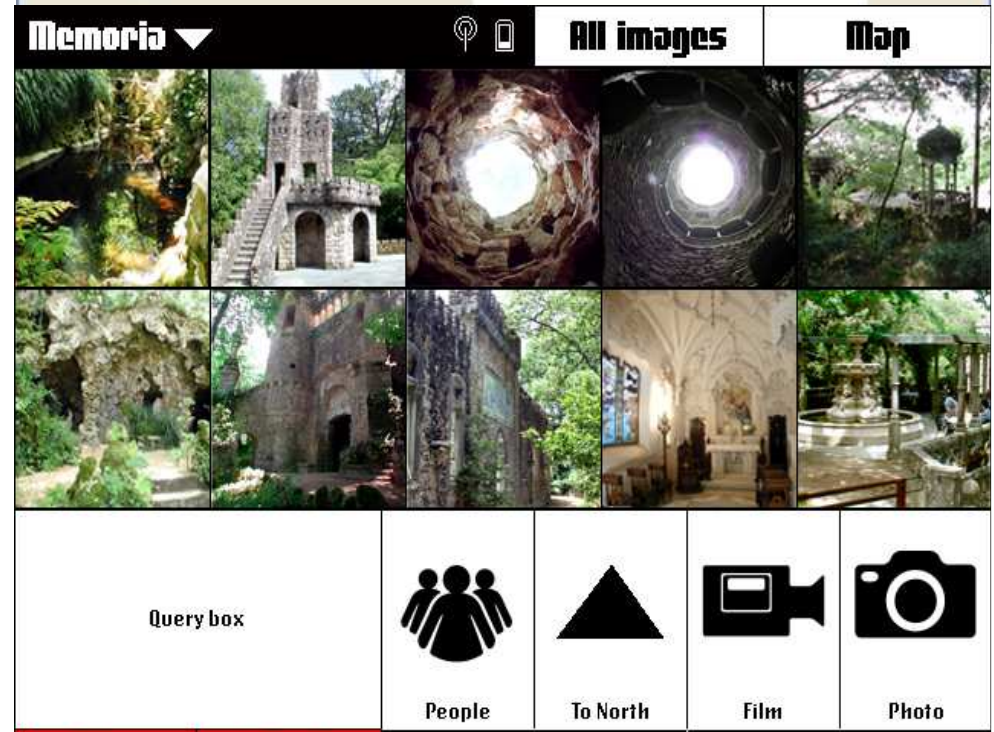

Desktop/PC

Powerful query language
Query by image (webcam) and parts of images

Mobile (PDA)

Uses content, location, and user annotations
Cultural heritage sites

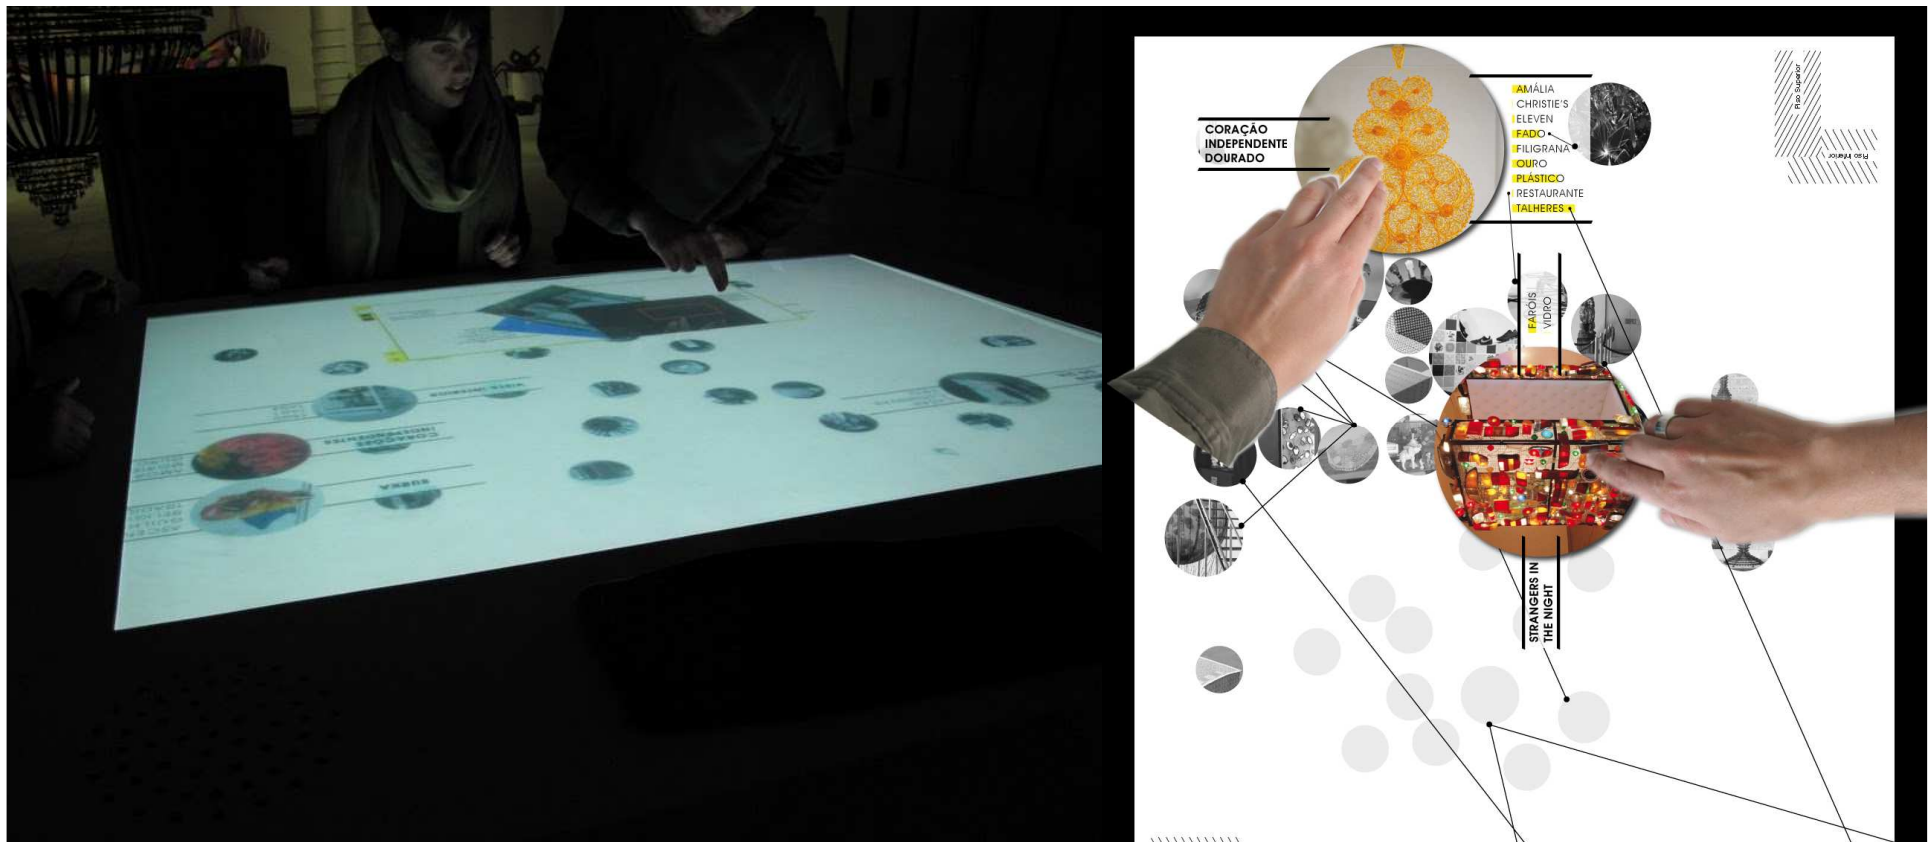

Touching Art

ArtTouch

Multitouch interface to explore an art exhibition, collect data and foster public participation

Berardo Museum – Joana Vasconcelos exhibition

Context

Large scale and high profile art exhibition

(>170000 visitors, about 1/3 used the table)

Artist Joana Vasconcelos (**joanavasconcelos.com**)

Museums as a natural laboratory

- Technology, interaction, social analysis

Technological artifact as a mediator

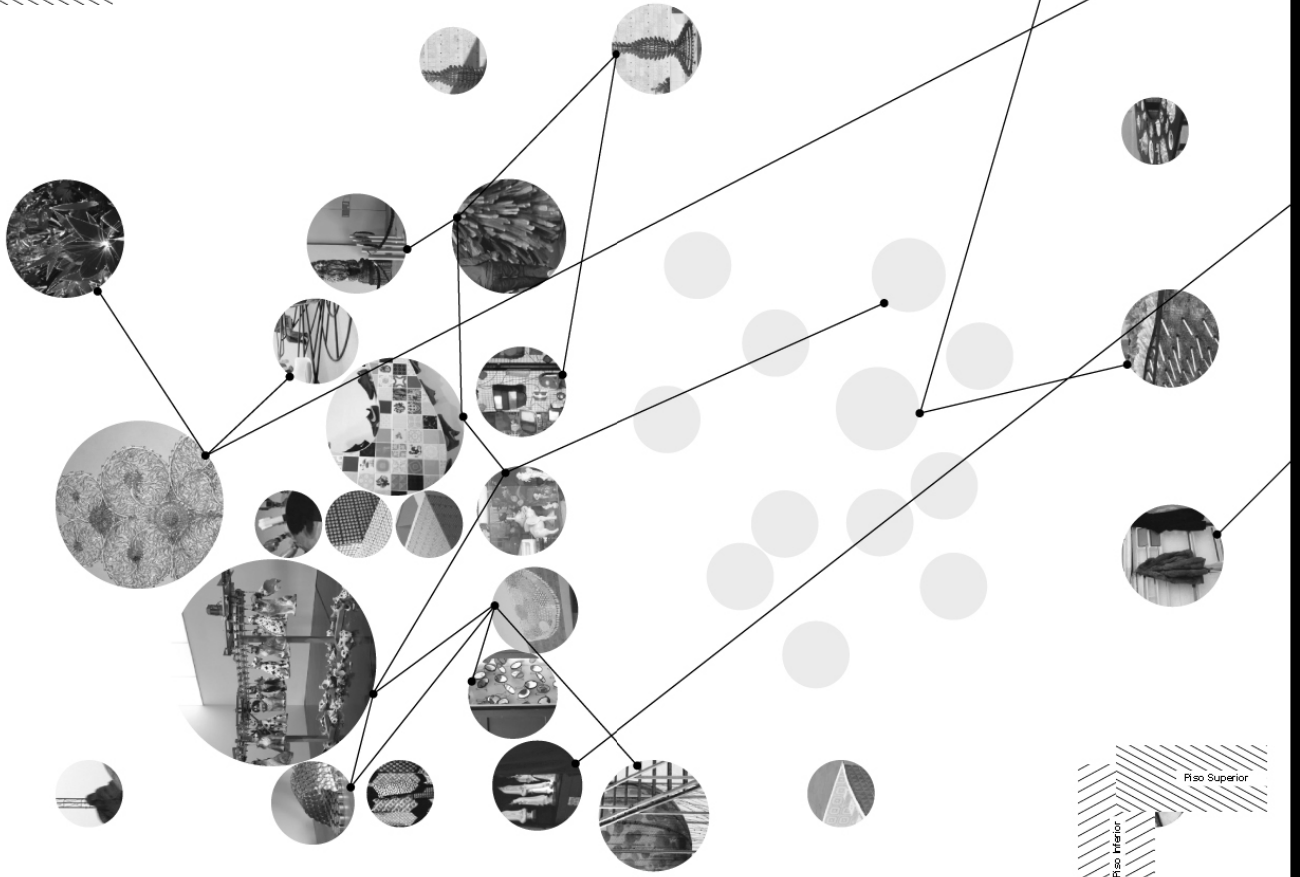

- Explore the collection

- Share and discuss

- Add meaning through tags

Revisiting the Past

1957 Modern Art Exhibition

Recreate one of the first modern art exhibitions in Portugal
Uses the archive photos from Calouste Gulbenkian Foundation

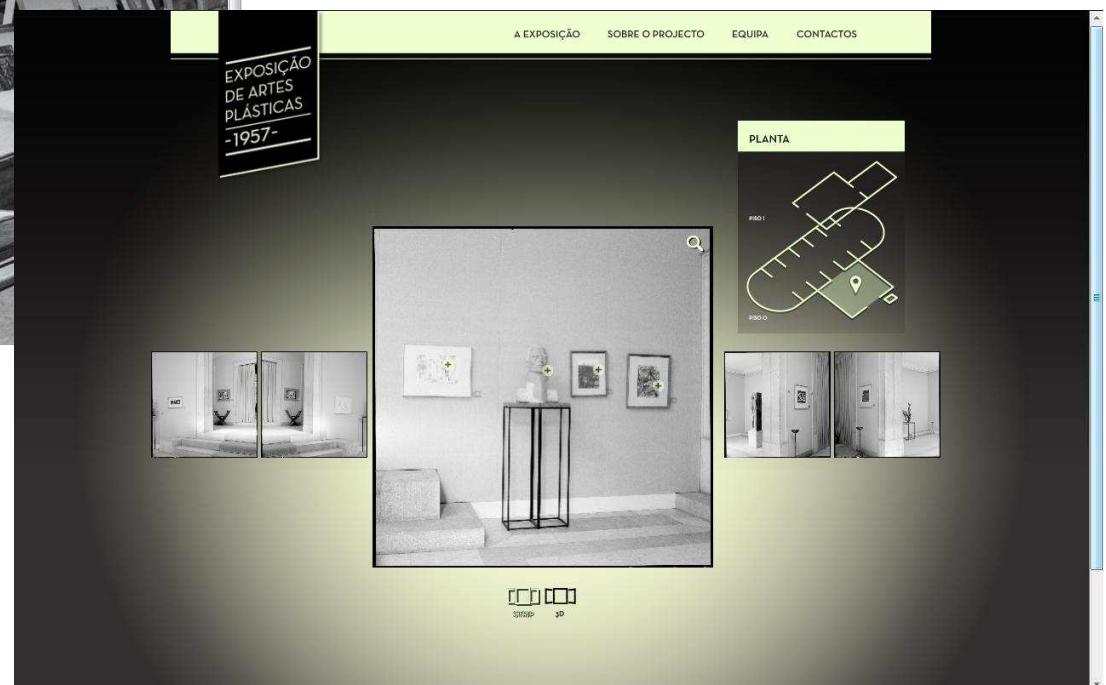

Virtual visit based on photos and video

Space reconstruction through
photo-stitching and multi-view stereo

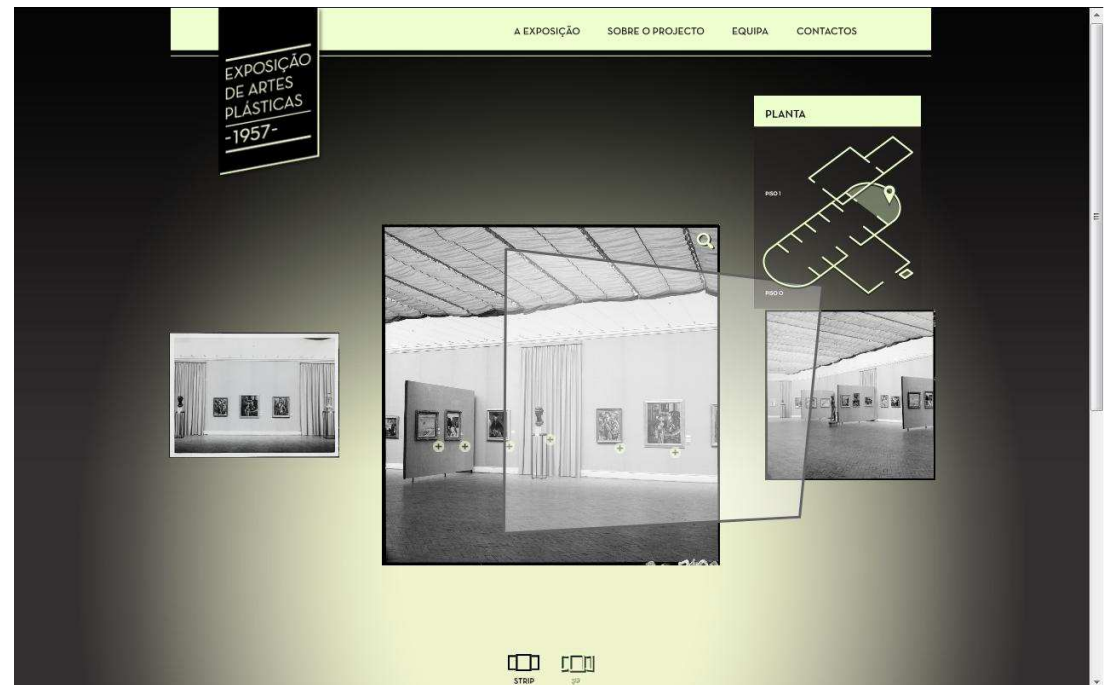

Partnerships:
Art History Institute (FCSH/UNL)
Calouste Gulbenkian Foundation

1957 Modern Art Exhibition

1957 Modern Art Exhibition

LX Conventos

LXConventos

Funded project on urban space

With Instituto de História da Arte, FCSH NOVA and CML

Tool for establishing relations among images (Evolapse)

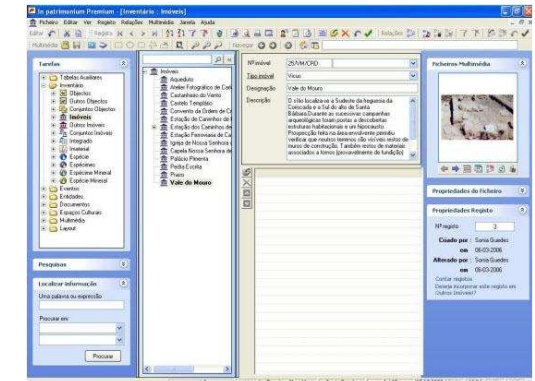

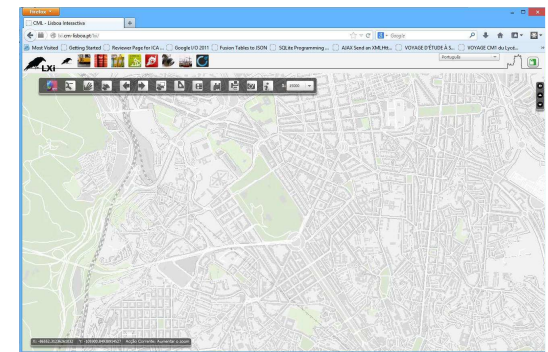

Resources

Historical cartography (1650-1950)

Photos (past and current)

Existing databases (In patrimonium and LXi)

Historical Cartography

Images

S. Bento

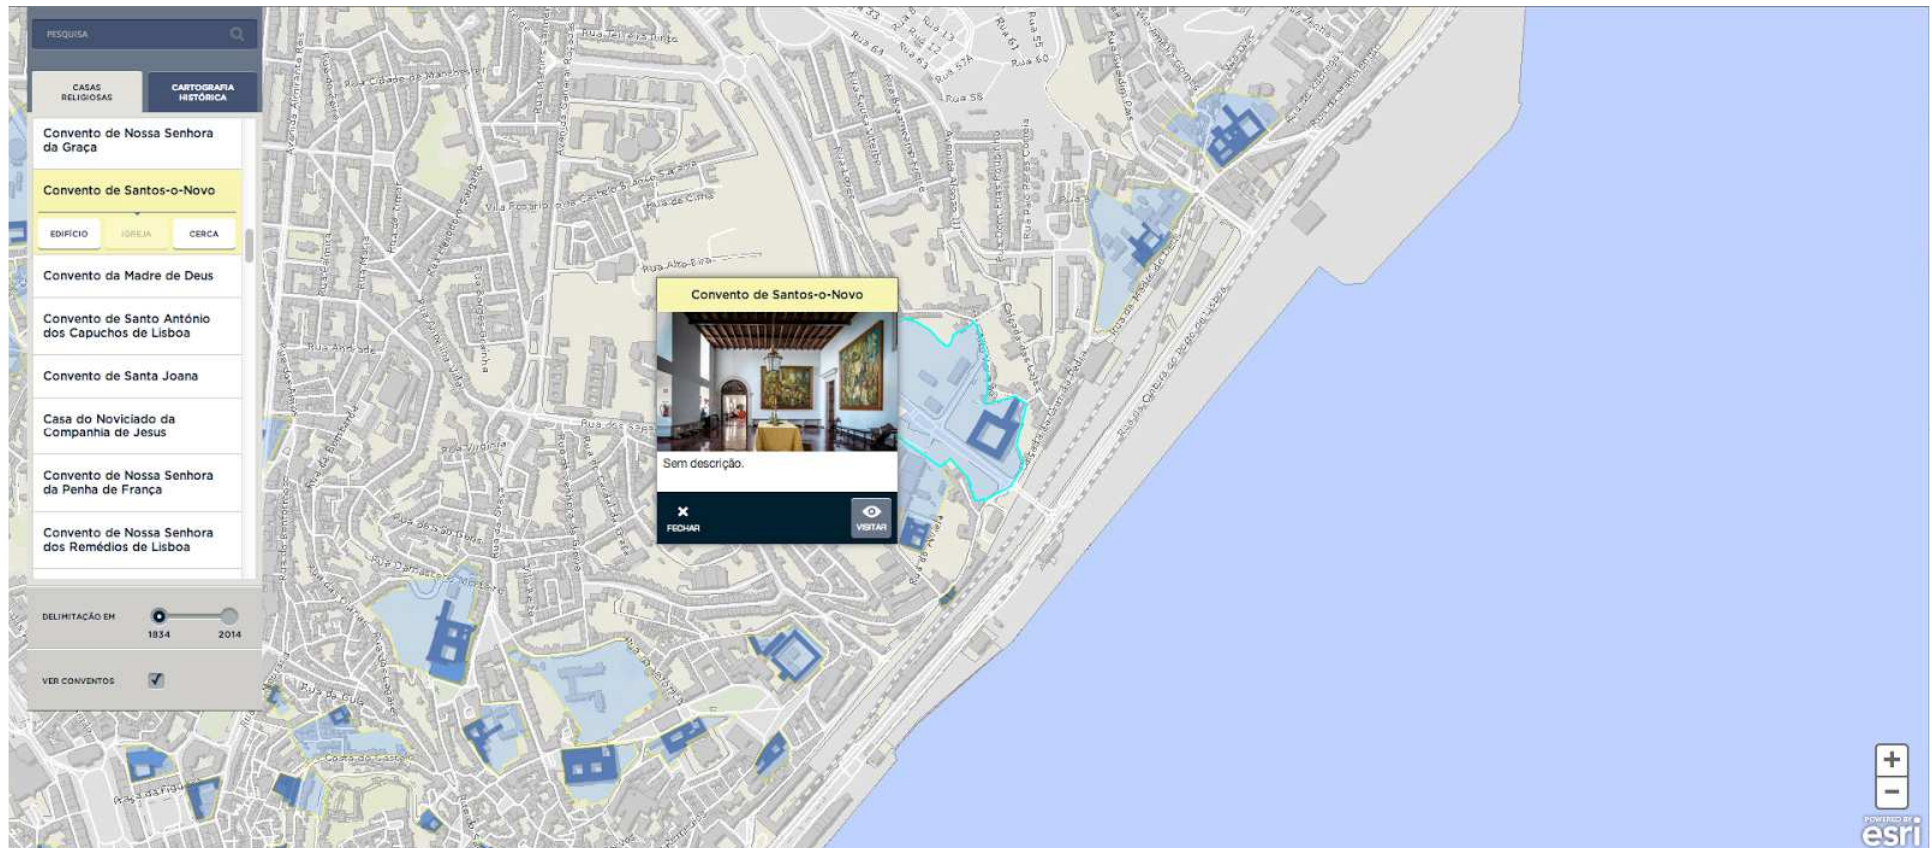

Platform

Cartography from 1650 over current map

Platform

Religious houses

Evolapse

Establish and edit relations among images of different periods
Generate external representations (2D-3D, video) that can be used in other contexts such as websites

Evolapse

Results (1943 + 2013 images)

Contemporary Dance

TKB – Video Annotation

Funded project on video annotation

Contemporary dance

With FCSH NOVA (PI: Carla Fernandes)

Contributed to an **ERC grant - BlackBox**

Several tools:

- Motion analysis

- Video annotation**

- Sketching over live video**

- Web archive

TKB Project

Creation Tool: Video Annotation

Text, Images

Pre-defined marks (e.g, sound, light)

Pen based annotation on video

Motion tracking

Web Archive for Contemporary Dance

Video based

Uses annotations to organize materials

Research Goals

Explore possibilities of live video for **interaction**, learning and content augmentation

Research on **natural pen based interaction** for temporal media

Several techniques developed in the TKB Project:

Video annotation

Sketching over live video

Motion analysis

Creation Tool

Web archive

Annotation Modalities

Annotation marks: concepts defined by the user and represented by a keyword and an icon.

Audio: microphone records voice annotations.

Text: using a physical keyboard or a virtual keyboard.

Ink strokes: sketching over a video stream.

Hyperlinks: local and external. The local links are other documents owned by the user. The external links are Web sites defined by a URL.

CTKB

Timeline

Browser window for DANCE-TECH.NET. The page title is 'DANCE-TECH.NET INTERDISCIPLINARY EXPLORATIONS ON THE PERFORMANCE'. The navigation menu includes: Home, About dance-tech.net, Community, DONATE, Top Content, IN Groups, Forum, Events, VIDEO, open, dance-tech by dance-tech@1. The browser address bar shows 'http://www.dance-tech.net/'. The page content includes a 'BMT' logo and a 'Sign in to chat' button. The browser status bar shows '84%' zoom level.

Bottom navigation bar with icons for Star, Pencil, Text (T), Zoom (Q), Add (+), Eraser, and a vertical progress bar.

Design Process

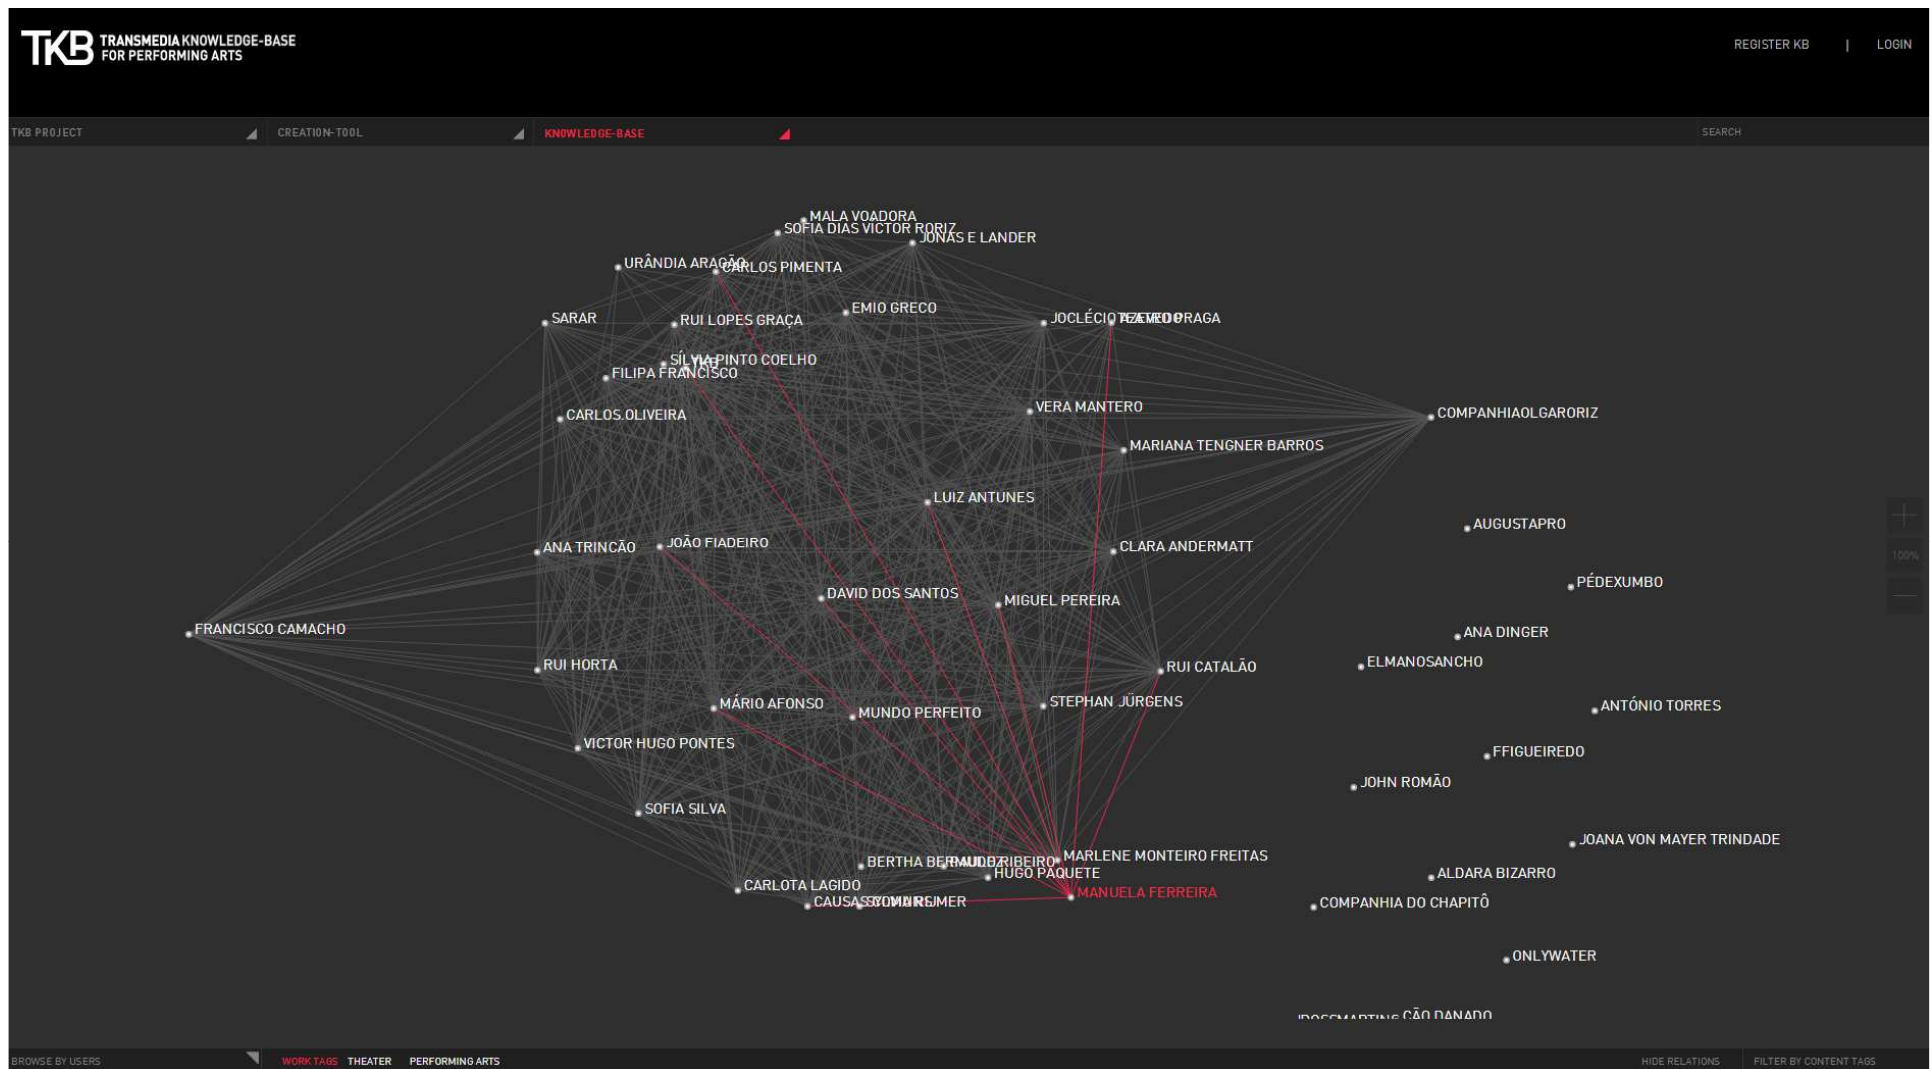

An iterative process: two choreographers were involved from the beginning.

Additional input from dancers and dance technology experts: in a one-week residence-lab workshop and during the development process.

Usability, user-friendly design and the ability to categorize the information into a coherent structure were main concerns.

With Prof. Carla Fernandes,
FCSH/UNL

Dance Knowledge Base

Video Quality Assessment

COGNITUS

Converging Broadcast and User Generated Content for Interactive Ultra-High Definition Services

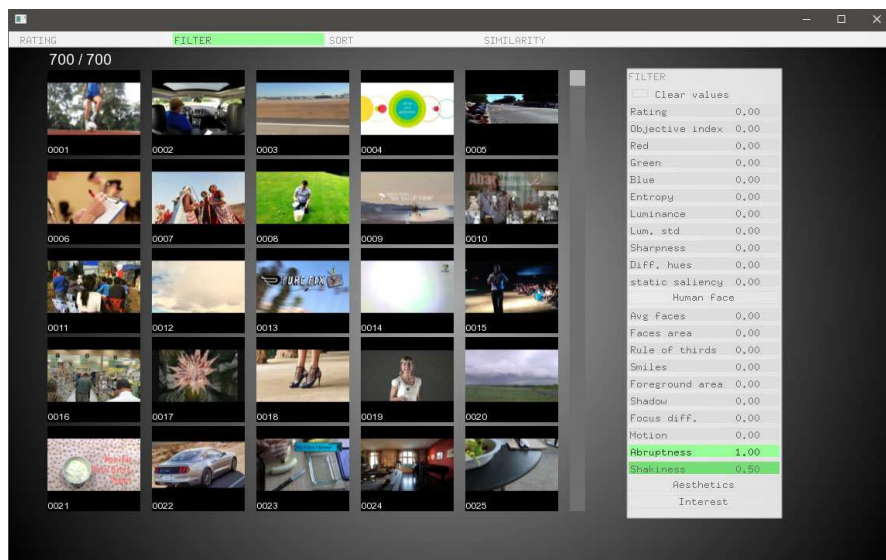

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 687605.

Semi Automatic Video Assessment

User generated content (e.g., music festivals)
Content filtering based on perception and attention
Human in the loop approach
